

# Concrete Moisture Test Starter Kit+ with Rapid RH® L6

The Concrete Moisture Test Starter Kit+ with Rapid RH® L6 includes everything you need to conduct Rapid RH L6 tests plus two Smart Logger™ temperature and relative humidity data loggers to monitor and record ambient job site conditions.

Rapid RH L6 features our patented Touch-n-Sense™ technology. Simply insert the Total Reader® into any test hole with a Rapid RH L6 Smart Sensor installed, and the two interact on contact. Once the reading has been taken, the numbers on the Total Reader will continue to display for 1 minute after being removed from the test hole, simplifying the testing and recording process at the jobsite. It's fast, it's accurate, and it's never been easier.
